

Pruning Trees and Fruit Trees

Saturday March 15, 2014 from 8:30 am to 4:00 pm
at the Lillooet Golf Course

Make sure you know how to make that pruning cut. This one-day workshop will review important concepts such as good structure, what to cut and where to cut, pruning to encourage production in fruit trees, as well as maintenance of pruning tools.

Participants will realize the importance of pruning to maintain tree health. There will be a strong focus on modern thinking – minimizing the number of cuts so the tree can heal rapidly. You will not become master pruners but you will know "good pruning" from "bad pruning".

Dress for the weather—the afternoon will be outdoors pruning fruit trees.

Instructor: Mario Lanthier, CropHealth Advising and Research, Kelowna BC

Pre-registration is required, cost \$95 + gst

Nancy at 250-256-7687 or Mario at office@crophealth.com
